

Name of Student: Vyankatesh Suresh Rohokale	PRN: 26070122518
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 12	
TITLE : User-Defined Packages	

Problem Statement

Write a Java program to create and use user-defined packages.

Learning Objectives

To create and use user-defined packages for organizing Java programs.

Programme

File1 : main file

The screenshot shows an IDE with a project named 'assignment06'. The Explorer panel on the left shows a package 'normalpackage' containing 'addition.class'. The main editor displays 'Demo.java' with the following code:

```

1  import normalpackage.addition;
2
3  public class Demo
4  {
5
6      public static void main(String[] args)
7      {
8
9          addition a = new addition();
10
11          a.add(10, 20);
12      }
13  }

```

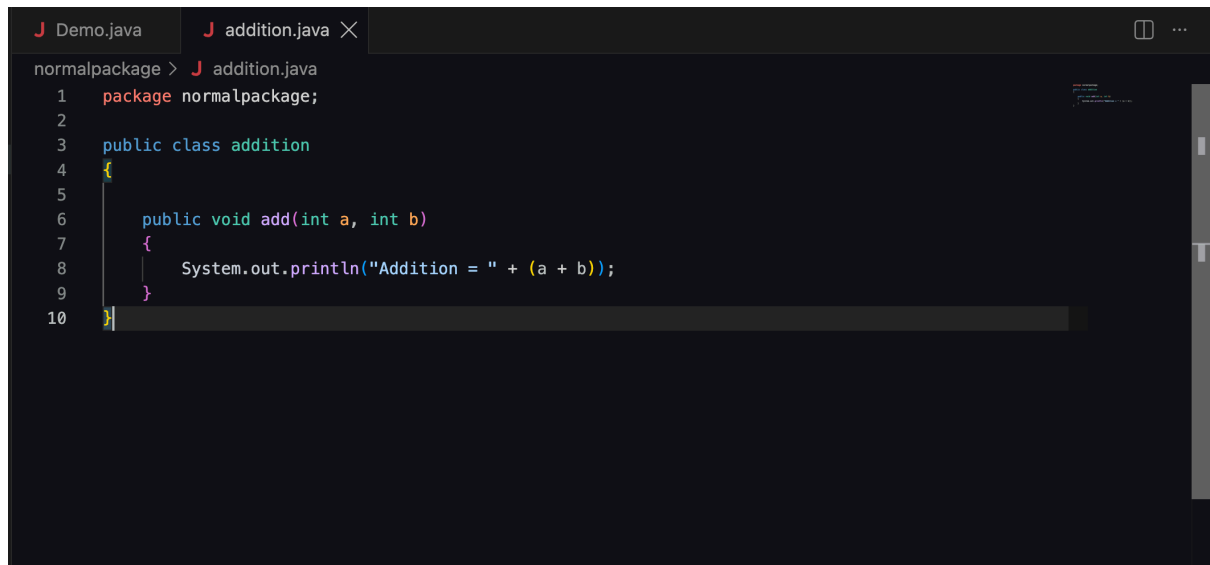

The bottom panel shows the terminal output:

```

piyushrohokale@Piyushs-MacBook-Air assignment06 % javac Demo.java && java Demo
Addition = 30
piyushrohokale@Piyushs-MacBook-Air assignment06 %

```

File2 : package file

```
J Demo.java J addition.java X
normalpackage > J addition.java
1  package normalpackage;
2
3  public class addition
4  {
5
6      public void add(int a, int b)
7      {
8          System.out.println("Addition = " + (a + b));
9      }
10 }
```

Output

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS CODE REFERENCE LOG
piyushrohokale@Piyushs-MacBook-Air assignment06 % javac Demo.java && java Demo
Addition = 30
piyushrohokale@Piyushs-MacBook-Air assignment06 %
```

Conclusion

The program successfully demonstrates the creation and use of a user-defined package in Java. The package helps organize related classes into a separate namespace, making the program more structured and easier to manage. By importing and using the package in another class, the program also demonstrates code reusability and modularity, which are important features of object-oriented programming.
