

Name of Student: Vyankatesh Suresh Rohokale	PRN: 26070122518
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 17	
TITLE : Swing and Applets	

Problem Statement

Write a Java program to demonstrate the use of Swing and Applets

Learning Objectives

To develop graphical user interfaces using Swing components and Applets.

Questions:

1. Create a simple **Student Registration Form GUI** using Swing.
2. Create a simple **Employee Registration Form** using **Java Swing GUI** that takes employee details such as Employee ID , Name , Department , and Salary. Display the entered information in a dialog box

Programme

1:

```
assignment17 > J StudentRegistrationForm.java > StudentRegistrationForm > StudentR
1  import javax.swing.*;
2  import java.awt.*;
3  import java.awt.event.*;
4
5  public class StudentRegistrationForm extends JFrame {
6
7      JTextField nameField, rollField, courseField;
8      JButton submitButton;
9
10     StudentRegistrationForm() {
11
12         setTitle(title: "Student Registration Form");
13         setSize(width: 400, height: 300);
14         setLayout(new GridLayout(rows: 4, cols: 2, hgap: 10, vgap: 10));
15
16         JLabel nameLabel = new JLabel(text: "Student Name:");
17         JLabel rollLabel = new JLabel(text: "Roll Number:");
18         JLabel courseLabel = new JLabel(text: "Course:");
19
20         nameField = new JTextField();
21         rollField = new JTextField();
22         courseField = new JTextField();
23
24         submitButton = new JButton(text: "Register");
25     }
```

```

25         add(nameLabel);
26         add(nameField);
27         add(rollLabel);
28         add(rollField);
29         add(courseLabel);
30         add(courseField);
31
32         add(new JLabel(text: ""));
33         add(submitButton);
34         submitButton.addActionListener(new ActionListener() {
35             public void actionPerformed(ActionEvent e) {
36
37                 JOptionPane.showMessageDialog(
38                     StudentRegistrationForm.this,
39                     "Student Registered Successfully\n"
40                     + "Name: " + nameField.getText()
41                     + "\nRoll Number: " + rollField.getText()
42                     + "\nCourse: " + courseField.getText()
43                 );
44             }
45         });
46         setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
47         setVisible(b: true);
48     }
49     Run | Debug
50     public static void main(String[] args) {
51
52         new StudentRegistrationForm();
53     }

```

2:

```

assignment17 > J EmployeeRegistrationForm.java > EmployeeRegistrationForm > Em
1  import javax.swing.*;
2  import java.awt.*;
3  import java.awt.event.*;
4  public class EmployeeRegistrationForm extends JFrame {
5      JTextField idField, nameField, departmentField, salaryField;
6      JButton submitButton;
7      EmployeeRegistrationForm() {
8          setTitle(title: "Employee Registration Form");
9          setSize(width: 450, height: 300);
10         setLayout(new GridLayout(rows: 5, cols: 2, hgap: 10, vgap: 10));
11         JLabel idLabel = new JLabel(text: "Employee ID:");
12         JLabel nameLabel = new JLabel(text: "Name:");
13         JLabel departmentLabel = new JLabel(text: "Department:");
14         JLabel salaryLabel = new JLabel(text: "Salary:");
15         idField = new JTextField();
16         nameField = new JTextField();
17         departmentField = new JTextField();
18         salaryField = new JTextField();
19         submitButton = new JButton(text: "Register");
20

```

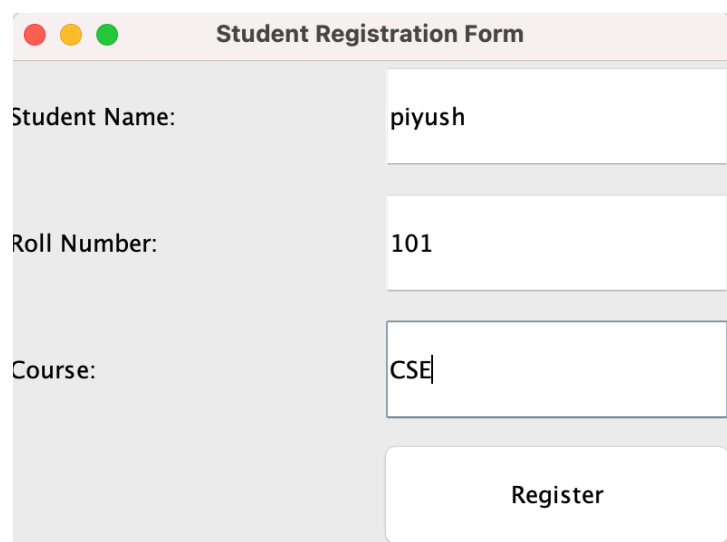

```

21         add(idLabel);
22         add(idField);
23         add(nameLabel);
24         add(nameField);
25         add(departmentLabel);
26         add(departmentField);
27         add(salaryLabel);
28         add(salaryField);
29         add(new JLabel(text: ""));
30         add(submitButton);
31         submitButton.addActionListener(new ActionListener() {
32             public void actionPerformed(ActionEvent e) {
33                 JOptionPane.showMessageDialog(
34                     EmployeeRegistrationForm.this,
35                     "Employee Details\n"
36                     + "Employee ID: " + idField.getText()
37                     + "\nName: " + nameField.getText()
38                     + "\nDepartment: " + departmentField.getText()
39                     + "\nSalary: " + salaryField.getText()
40                 );
41             }
42         });
43         setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
44         setVisible(b: true);
45     }
    Run | Debug
46     public static void main(String[] args) {
47         new EmployeeRegistrationForm();
48     }
49 }

```

Output

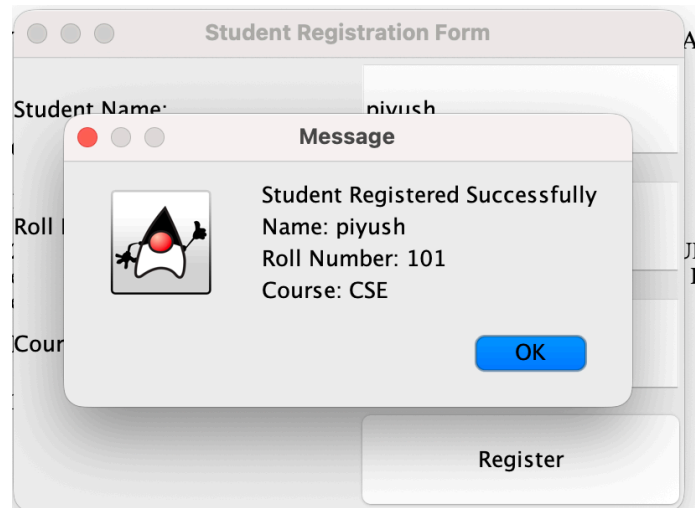

1:

The screenshot shows a Java Swing window titled "Student Registration Form". The window has a light gray background and a title bar with standard macOS window controls (red, yellow, green buttons). The form contains three text input fields arranged vertically. The first field is labeled "Student Name:" and contains the text "piyush". The second field is labeled "Roll Number:" and contains the text "101". The third field is labeled "Course:" and contains the text "CSE". Below these fields is a white button with the text "Register".

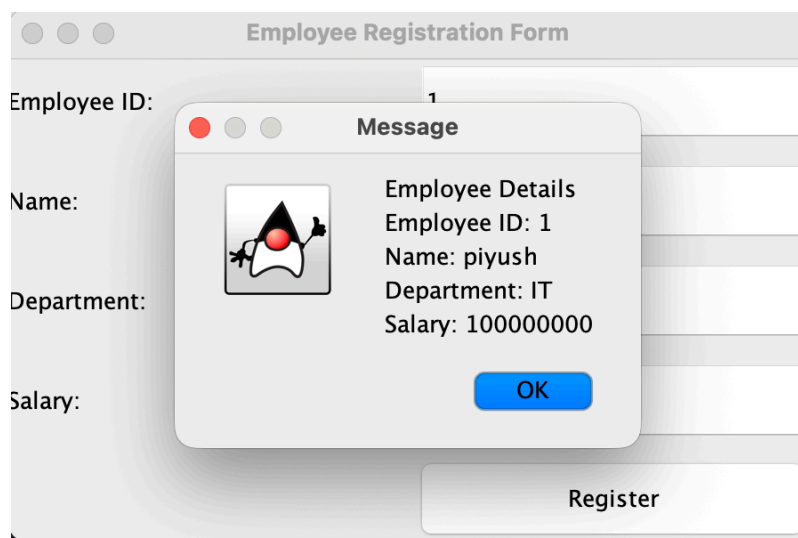

Field Label	Field Value
Student Name:	piyush
Roll Number:	101
Course:	CSE

Register

2:

The image shows an 'Employee Registration Form' window. It contains input fields for 'Employee ID' (filled with '1'), 'Name' (filled with 'piyush'), 'Department' (filled with 'IT'), and 'Salary' (filled with '100000000'). A 'Register' button is at the bottom right.

VyankateshRohokale Add Employee Registration Form GUI

52fbcea · 3 minutes ago **History**

Name	Last commit message	Last commit date
..		
Assignment 17.docx	q3wr	4 minutes ago
EmployeeRegistrationForm.java	Add Employee Registration Form GUI	3 minutes ago
StudentRegistrationForm.java	Create StudentRegistrationForm.java	3 minutes ago

Conclusion

The programs successfully demonstrate the use of Java Swing components to create graphical user interfaces. The Student and Employee Registration Forms accept user input through text fields and display the entered information using dialog boxes. This demonstrates basic GUI design and event handling in Java.
