

Name of Student: Vyankatesh Rohokale	PRN: 26070122518
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 21	
TITLE : JDBC DriverManager, Connection, and Statement	

Problem Statement

Demonstration and exploration of JDBC classes and interfaces (DriverManager, Connection, Statement).

Learning Objectives

To understand and use the core JDBC classes for database connectivity.

Programme

1: Create a program to connect Java with database and display database connection status.

```
import java.sql.Connection;
import java.sql.DriverManager;

public class DatabaseConnection {

    public static void main(String[] args) throws Exception {

        Class.forName("com.mysql.cj.jdbc.Driver");

        String db = "jdbc:mysql://localhost:3306/employee";
        String user = "root";
        String password = "admin@123";

        try {
            Connection con = DriverManager.getConnection(db,
user, password);

            System.out.println("Database connection
successful");

            con.close();

        } catch (Exception e) {
```

```

        System.out.println("Database connection failed");
        System.out.println("Error: " + e.getMessage());
    }
}
}

```

```

● piyushrohokale@Piyushs-MacBook-Air JDBC % java -cp "src
Database connection successful
○ piyushrohokale@Piyushs-MacBook-Air JDBC % 

```

2: Create a Java program to connect with a database and display the connection status. After successful connection, show a message indicating that the Student database is connected successfully.

```

import java.sql.Connection;
import java.sql.DriverManager;

public class StudentDatabaseConnection {

    public static void main(String[] args) throws Exception {

        Class.forName("com.mysql.cj.jdbc.Driver");

        String db = "jdbc:mysql://localhost:3306/employee";
        String user = "root";
        String password = "admin@123";

        try {
            Connection con = DriverManager.getConnection(db,
user, password);

            System.out.println("Student database connected
successfully");

            con.close();

        } catch (Exception e) {
            System.out.println("Student database connection
failed");
            System.out.println("Error: " + e.getMessage());
        }
    }
}

```

```
piyushrohokale@Piyushs-MacBook-Air JDBC % javac -cp lib/a
a
java -cp "src:lib/mysql-connector-j-26.7.0.jar" StudentD
Student database connected successfully
piyushrohokale@Piyushs-MacBook-Air JDBC %
```

DatabaseConnection.java	assignment 20	now
StudentDatabaseConnection.java	assignment 20	now

Conclusion

The program successfully demonstrates how to connect a Java application to a MySQL database using JDBC. It checks the database connection and displays a confirmation message when the Student database is connected successfully.
