Semester: III Year : AY 2026-27

Subject: Programming with Java

ASSIGNMENT No : 6

TITLE : Inner and Anonymous Classes

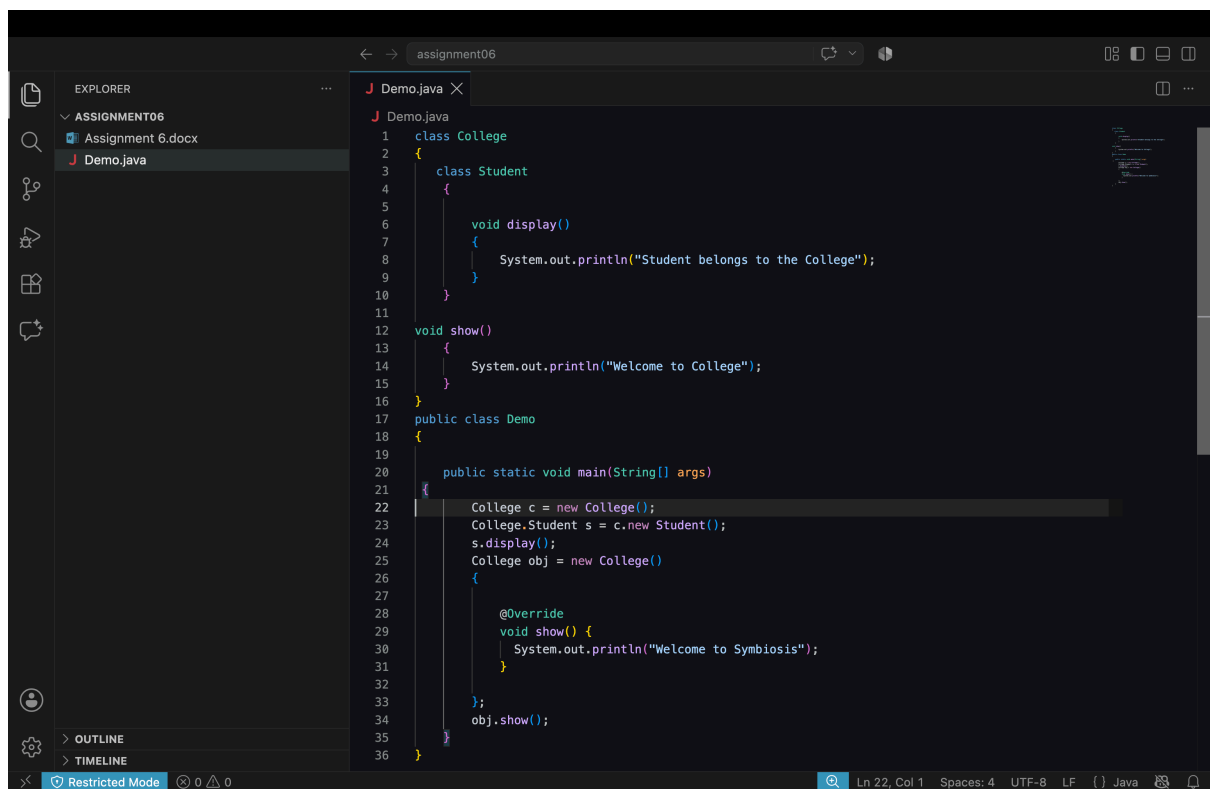

Problem Statement

Write a Java program to demonstrate the use of an inner class, an anonymous class.

Learning Objectives

To implement inner classes and anonymous classes for improving encapsulation and event handling in Java.

Programme

```
1 class College
2 {
3     class Student
4     {
5
6         void display()
7         {
8             System.out.println("Student belongs to the College");
9         }
10    }
11
12    void show()
13    {
14        System.out.println("Welcome to College");
15    }
16 }
17 public class Demo
18 {
19
20     public static void main(String[] args)
21     {
22         College c = new College();
23         College.Student s = c.new Student();
24         s.display();
25         College obj = new College()
26         {
27
28             @Override
29             void show() {
30                 System.out.println("Welcome to Symbiosis");
31             }
32
33         };
34         obj.show();
35     }
36 }
```

Output

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS CODE REFERENCE LOG
piyushrohokale@Piyushs-MacBook-Air assignment06 % javac Demo.java && java Demo
Student belongs to the College
Welcome to Symbiosis
piyushrohokale@Piyushs-MacBook-Air assignment06 %
```

Conclusion

This program demonstrates the use of Inner Class and Anonymous Class in Java. The inner class helps organize related classes together, while the anonymous class allows us to override a method without creating a new class. These features make Java programs easier to write, understand, and maintain.
