

Name of Student: Vyankatesh Suresh Rohokale	PRN: 16070122518
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 8	
TITLE : Super Keyword in Java	

Problem Statement

Write a Java program to demonstrate the use of the super keyword in inheritance.

Learning Objectives

To demonstrate the use of the super keyword for accessing parent class members.

Programme

```
J Demo.java •
J Demo.java
1  class Person
2  {
3
4      String name = "Vyankatesh";
5
6      void display()
7      {
8          System.out.println("Parent Class Method");
9      }
10 }
11
12 class Student extends Person
13 {
14
15     String name = "Piyush";
16
17     void show()
18     {
19
20         // Using Parent Class Variable
21
22         System.out.println("Parent Name : " + super.name);
23
24
25         // Using Child Class Variable
26         System.out.println("Child Name : " + name);
27
28         // Calling Parent Class Method
29         super.display();
30     }
31 }
```

```
32
33 public class Demo
34 {
35
36     public static void main(String[] args)
37     {
38
39         Student s = new Student();
40
41         s.show();
42     }
43 }
```

Output

```
piyushrohokale@Piyushs-MacBook-Air assignment06 % javac Demo.java && java Demo
Parent Name : Vyankatesh
Child Name : Piyush
Parent Class Method
piyushrohokale@Piyushs-MacBook-Air assignment06 %
```

Conclusion

The program successfully demonstrates the use of the super keyword in Java. It is used to access the parent class variable and method from the child class.

The super keyword helps avoid ambiguity between parent and child class members and promotes effective use of inheritance.
