

Name of Student: Vyankatesh Suresh Rohokale	PRN:26070122518
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 11	
TITLE : Interface Implementation	

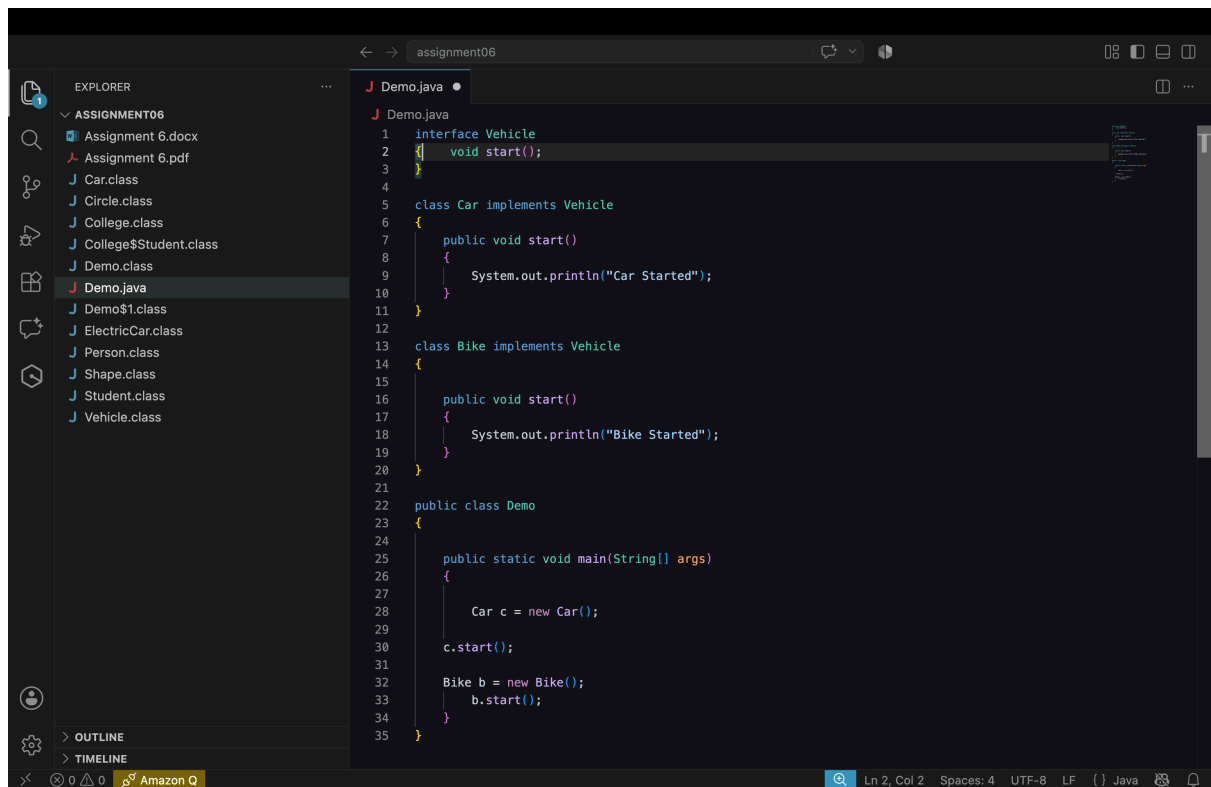

Problem Statement

Write a Java program to demonstrate the implementation of interfaces.

Learning Objectives

To implement interfaces for achieving abstraction and multiple inheritance of type.

Programme

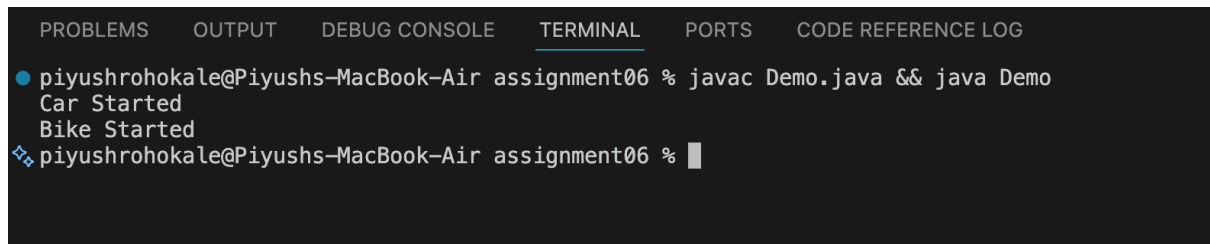

```

1  interface Vehicle
2  {
3      void start();
4  }
5
6  class Car implements Vehicle
7  {
8      public void start()
9      {
10         System.out.println("Car Started");
11     }
12 }
13
14 class Bike implements Vehicle
15 {
16     public void start()
17     {
18         System.out.println("Bike Started");
19     }
20 }
21
22 public class Demo
23 {
24     public static void main(String[] args)
25     {
26         Car c = new Car();
27         c.start();
28
29         Bike b = new Bike();
30         b.start();
31     }
32 }
33
34
35

```

Output

A screenshot of an IDE's terminal window. The terminal has a dark background with light-colored text. At the top, there are tabs labeled 'PROBLEMS', 'OUTPUT', 'DEBUG CONSOLE', 'TERMINAL' (which is active and underlined), 'PORTS', and 'CODE REFERENCE LOG'. The terminal shows the command 'javac Demo.java && java Demo' being executed. The output of the program is displayed on the next two lines: 'Car Started' and 'Bike Started'. The prompt 'piyushrohokale@Piyushs-MacBook-Air assignment06 %' is visible at the end of the command line and on a new line below the output.

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  CODE REFERENCE LOG
piyushrohokale@Piyushs-MacBook-Air assignment06 % javac Demo.java && java Demo
Car Started
Bike Started
piyushrohokale@Piyushs-MacBook-Air assignment06 %
```

Conclusion

The program successfully demonstrates the implementation of an interface in Java. The Payment interface defines a common method , while the CreditCard and UPI classes provide their own implementations. This approach promotes abstraction , code reusability, and flexibility , allowing different classes to implement the same interface in their own way.
